Summary

Software Engineer with 1+ years of experience developing and maintaining enterprise web applications. Experienced in designing and developing full-stack applications and RESTful APIs using Java, Spring Boot, JavaScript, React, Node.js, and SQL. Strong foundation in enterprise software development, system integration, and Agile practices, with demonstrated ability to deliver reliable software and resolve complex production issues.

Education

Singapore Polytechnic Diploma in Information Technology University of Information Technology Bachelor of Computer Science (2 years completed)	Singapore Apr 2023 – May 2026 Myanmar Dec 2017 – Mar 2020
--	--

Experience

Greenfossil Pte Ltd Full-stack Developer Intern	Singapore Mar 2025 – Apr 2026
- Developed and enhanced 3 enterprise full-stack web applications using Scala, Vue.js, SQL, and internal enterprise frameworks, delivering production-ready features used by multiple enterprise clients. - Investigated and resolved 40+ production issues, improving application stability and reducing user-reported defects by 30% - Performed functional, regression, and user acceptance testing across 5+ enterprise projects, contributing to a 70% reduction in post-release defects. - Collaborated with senior developers and business stakeholders throughout the full Software Development Life Cycle (SDLC), from requirements gathering to production deployment. - Designed 15+ reusable frontend components, reducing development effort for new features and improving consistency across multiple applications. - Co-developed an internal Leave Management System with 2 developer interns for 12 employees, reducing manual administrative work and accelerating leave approval workflows.	
Innovix Solutions ERP Odoo Developer Intern	Myanmar Mar 2022 – May 2022
- Customized and deployed 3 Odoo ERP modules using Python, XML, PostgreSQL, and Odoo ORM, improving business operations and workflow efficiency. - Automated business reporting using Python, Excel, and py3o, saving approximately 3 hours of manual reporting every week. - Collaborated with business users to gather user requirements and translated them into scalable ERP solutions.	

Projects

AI Expense Tracker	May 2026 – June 2026
- Developed a production-ready AI-powered personal finance platform using React, Node.js, Express, PostgreSQL, and Google Gemini API to track expenses, manage budgets, and receive AI-generated spending insights. - Secured user accounts with JWT authentication, protected routes, and input validation, preventing unauthorized access and common web vulnerabilities. - Architected secure 10+ RESTful APIs, supporting authentication, transaction management, budgeting, and analytics - Integrated Google Gemini API to generate personalized spending insights and savings recommendations, enhancing users' financial decision-making. Live Demo: https://ai-expense-tracker-ekkv.onrender.com	
Leave Management System	Nov 2025 – Feb 2026
- Co-developed a scalable enterprise leave management system using Scala, Vue.js, internal company frameworks, and libraries, automating leave requests, approvals, and entitlement workflows - Implemented business logic that automated leave entitlement calculations based on company policies, eliminating manual leave balance calculations. - Implemented automated email reminders for leave approvals using cron jobs, improving operational efficiency. - Designed reporting dashboards, calendar views, and role-based access control (RBAC), improving system usability.	
Project Management System	Jan 2025 – Feb 2025
- Built a full-stack project management application using Node.js, Express.js, PostgreSQL, Prisma ORM, JavaScript, and AWS, supporting authentication, task assignment, project tracking, and deadline management. - Designed a relational PostgreSQL database schema using Prisma ORM to manage relational data efficiently. - Developed secure RESTful APIs, enabling CRUD operations with role-based authorization and scalable architecture - Implemented CI/CD pipelines using AWS and GitHub Actions, reducing manual deployment effort.	
Cleaning Service Platform	Dec 2024 – Jan 2025
- Developed a full-stack service booking platform using Java, Spring Boot, Java Servlets, HTML5, CSS3, Bootstrap, and the Stripe API, enabling customers to schedule, book, modify, and manage appointments. - Integrated Stripe API to provide secure payment processing and transaction verification for online bookings. - Built an administrative dashboard for managing service listings, customer bookings, and daily operational activities.	

Skills

Programming Languages: Java • JavaScript • TypeScript • Python • Scala
Frontend: React • Vue.js • jQuery • Material UI • HTML • CSS • Bootstrap • Tailwind CSS • LESS
Backend: Node.js • Express.js • Spring Boot • REST APIs
Database Management: PostgreSQL • MySQL • MongoDB • Prisma • MariaDB
Tools: Git • AWS • Linux • Windows • CI/CD • Workflow Automation • Vite • Webpack • Agile • Scrum • SDLC • Claude Code
Interpersonal Skills: Detail Oriented • Leadership • Communication • Collaboration • Self-directed learning • Time Management • Ownership • Adaptability
